Safety Data Sheets for Lab Ultrafiltration Devices

To whom it may concern,

New regulations for the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) have been introduced. This also covers safety data sheets and communication information on substances.

As defined in REACH/CLP regulations, our products are considered “articles” rather than “substances”, as per REACH, Article 3, point 3 and CLP, Article 2. (*“article: means an object which during production is given a special shape, surface or design which determines its function to a greater degree than does its chemical composition”*) and therefore exempt from providing safety data sheets as per REACH Article 31.

None of the products listed below contain any substances that fall into the classifications of REACH Article 33.

We can confirm that the products and accessories for the following product ranges:

Vivaspin Filtrate

Vivacell

Vivaclear

Vivafree

Vivaflow

Vivapore

Vivaspin

do not contain any substances that fall into the above classifications, and so a safety data sheet is not applicable.

Sincerely,

Sartorius Stedim Lab Ltd.

Anthony Packham,
